- As you are loading your content for synchronization with your current data recipients, you are entering all the key details about your items
- The 1WorldSync Digital Catalog simply takes key elements of that information and places it in a publicly accessible catalog that you can use for a variety of purposes.
  - The information that you can make available is precisely the information you would want to put in front of a perspective buyer or consumer.

## Where Does the Data Come From?

But what if I have items that I'd love to get in front of buyers and consumers that I'm not currently synchronizing?

## Load those items into Item Management!

•

- If you choose to, you can enter product information specifically for the Digital Catalog.
- Later, if those items are selected by a buyer or retailer, you already have a great start on getting the content synchronized!
